## FACILITIES MANAGEMENT JOURNAL

### Custom finishes for card readers

Security Technologies Group (STG) announced today the availability of custom finishes for their

complete range of RFID card readers, designed to meet the demanding aesthetic requirements of today's building owners.

STG provides an innovative, patented, bespoke and customised printing service using a unique environmentally friendly process. Customers can choose from a range of 22 base colours and 86 styles that include Animal, Carbon, Graphics, Metal, Nature, Stone & Wood. Each coating is available in a matt, satin or gloss finish.

"No longer are End-users saddled with the standard black of beige card reader finishes that do not match the existing building décor", said Denis Kane, director of Security

Technologies Group.

### Master distributor announcement

Farpointe Data has announced the appointment of specialist access control distributor, Security Technologies Group (STG), as a master distributor for their complete range of readers and credentials throughout the Europe, Middle East and Africa (EMEA) region.

Scott Pearson, sales director for Farpointe, said: "We have seen, all too often in the past, customers struggling to reorder additional cards and tags (credentials) for their systems, with the original suppliers being of little assistance. Within their advanced Card Management software, STG is able to search via multiple criteria, in order to identify the correct technology, card format, facility code, and numbering sequence thus eliminating this headache for customers."
