Proximity Readers

Security Technologies Group (STG) announced the P-453 and P-455 Gibraltar proximity readers for their Pyramid Series Proximity line by Farpointe Data Inc. The Gibraltar Proximity

Readers are members of the Pyramid Series Proximity line of OEM proximity readers, cards and tags. Described as bullet resistant, these readers are made of stainless steel and Fiber-Tex, a UL 752 listed material for bullet-proof integrity. They feature epoxy potted electronics, and come with tamper-proof screws. The manufacturers say that the readers are suitable for locations where crime and vandalism are a constant threat, such as schools, universities and inner-cities. The P-453 is a single-piece design which mounts to metal door or window frames (mullion) or flat surfaces.
